                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 monomers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           monomers interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                interact
                                                                                                                                                          interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          interact
                                                                             interact
                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The invention relates to selecting or designing a compound that interacts content that interleukin-6 receptor (IL-6R) via assessing and obtaining the compound of the receptor and testing the compound and a topographic region of the receptor and testing the compound for its ability to compound and a tropographic region of the receptor and testing the compound for its ability to compound an activity associated with the receptor. Also disclosed is the crystal structure of the IL-6R alpha chain. The compounds of the compounds of the crystal structure of the greet receptor modulators and may be useful in the compounds of the crystal structure and treatment of diseases associated with signalling by IL-6R crystal as multiple myeloma, lymphoma, inflammation, rheumatoid arthritis, compounds the cancer, Castleman's disease, AIDS, mesangial proliferative compourtate cancer, Castleman's disease, AIDS, mesangial proliferative to the method provides enhanced stereochemical complementarity relative to the maturally occurring IL-6 receptor ligand as well as a rational basis for the development of ligands for specific therapeutic applications. The compound of the linear sequence is that of the human IL-6R crystal structure will facilitate a compound of the invention which contains a C192A compounds contains a c192A compounds contain sequence is not shown within the contain wild-type protein sequence (AAO23014)

                                                                                                                                                                                                                                                                                                         The invention relates to the production of human interleukin-6 receptor (IL-6R) protein in the fungus Pichia pastoris. The fungus was transformed with an expression vector (poIC9-A2OIL) containing a gene encoding an IL-6R protein having an immunoglobulin-like region and cytokine receptor region and spanning amino acids from Leu20-Ala323. The human IL-6R region was PCR amplified using the primers AAA70702-A70703. This sequence represents the recombinant IL-6R protein of the invention
                                                                                                                                                                                                                                                                                    Sequence 325

BoIII12 consists of a heterodimer of p35 and p40 subunits. BoIII12 is produced by introducing into a host cell, recombinant vectors containing genes encoding the p35 and p40 subunits. This sequence represents the bovine II12 p35 subunit. Interleukin 12 is used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 325 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Preparation of bovine interleukin 12 comprising using a vector containing the gene encoding it, useful for the prevention and treatment of chronic and opportunistic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          prevention infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 1; Page 8; 11pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sepsis;
                                                                                                                                                                                                                                                                                                                                 interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                interact
                                                                                              interact
                                                                                                                                           interact
      The invention relates to selecting or designing a compound that interacts with the interleukin-6 receptor (IL-6R) via assessing and obtaining the stereochemical complementarity between the compound and a topographic region of the receptor and testing the compound for its abbility to modulate an activity associated with the receptor. Also disclosed is the crystal structure of the IL-6R alpha chain. The compounds of the invention act as cytokine receptor modulators and may be useful in the prevention and treatment of diseases associated with signalling by IL-6R such as multiple myeloma, lymphoma, inflammation, rheumacoid arthritis, prostate cancer, Castleman's disease, AIDS, mesangial proliferative glomerulonephritis, Kaposi's sarcoma, sepsis, osteoporosis and psoriasis.
                                                                                                                                                                                                                     Selecting or designing compound interacting with interleukin receptor, useful for treatment of e.g. AIDS, involves assessing and testing compound to modulate activity of receptor.
                                                                                                                                                                                                                                                                                                                   Varghese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The method provides enhanced stereochemical complementarity relative to the naturally occurring IL-6 receptor ligand as well as a rational basis for the development of ligands for specific therapeutic applications. The information provided by the IL-6R crystal structure will facilitate a more accurate understanding of how the binding of a ligand leads to signal transduction. The current sequence is that of the human IL-6R alpha chain mutant protein of the invention which contains a W214N substitution. Note: The present sequence is not shown within the specification but was created by the indexer using the human IL-6R alpha chain wild-type protein sequence (AAO23014)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 325 AA;

Title:
Sequence:
1 WS-09-462-416-7
Perfect score: 2861
Sequence:
1 MLAVGCALLAALLAAPGAAL......LILRSFKEFLQSSLRALRQM 543
Scoring table:
BLOSUM62
Gapop 10.0, Gapext 0.5
Searched:
283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters:
283416
Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 100%
Listing first 45 summaries
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
